EURO DNA Fingerprint Ancestry Report

Dxxxx - C0Z-

Distinct genome-wide genetic systems known as **autosomal** markers were analyzed at our accredited testing laboratory. This generated a uniquely identifying **DNA fingerprint** or **profile** for the subject. **Alleles** are values in our genes that make us different from others. The resulting DNA Fingerprint reflects inherited changes from all previous generations and can suggest probable ethnic matches for the individual (Balding et al., 2001). Since the 1990s, this test has provided **forensic** evidence in criminal cases to prove, for example, that blood found on a crime victim belongs to a certain suspect (Butler). More recently, it has been adapted to explore an individual's ancestral origins.

According to recent research in population genetics, genes mirror the geography of Europe. Modern-day European subpopulations correspond roughly to national and linguistic boundaries (Lao et al. 2008). A search was thus made for high **Random Match Probabilities** in the EURO section of the computer program **atDNA 10.3**, covering 47 populations. By a calculation restricted to **European** data, and using the 10-locus STR standard of **ENFSI**, your top 20 national matches are listed below. Because they are all in the top half of your matches, you are likely to have ancestors in these countries.

Rank	European Population Matches
1	Greece (n = 208)
2	Armenian - (n = 404)
3	Northern Ireland (n = 207)
4	Austria (n = 222)
5	Netherlands (n = 231)
6	Albanian - Kosovo (n = 136)
7	Macedonian (n = 100)
8	Turkish (n = 500)
9	Scotland - Highlands (n = 228)
10	Bosnia and Herzegovina (n = 171)
11	Hungary (n = 224)
12	Czech Republic (n = 200)
13	England/Wales (n = 437)
14	Finland (n = 230)
15	Estonia (n = 150)
16	Belgium (n = 206)
17	Portugal (n = 150)
18	Western Sicily (n = 120)
19	Israeli Jews (n = 163)
20	Sweden (n = 424)

The relative strength index (RSI) for each population is shown on page 6. The n-number (n=109, n=228, etc.) reflects the number of participants in the sample used to represent the population in the published study. For more information, links and representative examples of any given ancestry, see [All Populations](#).

Analysis and Conclusion

Profile frequencies suggest your ancestors' principal origins in Europe—not necessarily in strict order of importance—are the nationalities listed above. It is not possible to state percentages, since no population is pure and unmixed. Finland and Estonia may appear because of high Native American admixture.

Power Tip. Family traditions often discount certain emigration stories and give more weight to others, usually more favored and prestigious countries of origin. If you are seeing an unfamiliar ancestry in your results, it does not mean it is the strongest contributor, but it does suggest "the rest of the story."

Remember, these results are based on input of your DNA profile into a population database containing only countries of Europe. They do not show your world connections. Europe was the last landmass to be colonized by modern humans, so Europeans carry the heritage not only of Asia and Africa but pre-existing Neanderthals, with whom they interbred.

Most people in our experience are more mixed than they know. We suggest you follow up with a full [DNA Fingerprint Plus](#) to explore your full ancestry, get world population matches, megapopulation comparisons and see what European and non-European ethnic markers you possess. There is no need to resample. Simply order the [Premium Upgrade](#) You will also receive your raw lab results or [CoDIS](#) markers and unique DNA profile.

Because people often prove to have several European countries of derivation, we recently introduced a choice of handsome personalized [Ancestry Certificates](#) you can order after receiving your report. We can send you one or more for any result in the Top Twenty populations of your EURO DNA test. Choose from Irish, Scottish, German, Russian, Italian, English/Welsh and others.

Disclaimers

This EURO DNA Test is a probabilistic prediction of ancestry for personal knowledge only. It is a non-chain of custody form of testing and is not intended for legal or official purposes. Its results may or may not confirm expected ethnic composition, family history or genealogical determinations. Alone, it may not be used to prove identity, biological relationships, nationality, citizenship, immigration or tribal enrollment.

Statement on Ethnicity

Allelic population analysis is a science still in the early stages of development. As our understanding of human history and prehistory improves and more specific markers are discovered for distinct populations we can expect the accuracy of prediction of the ethnic constituents in our ancestry to increase. Here are some links to common populations mentioned in this report.

Albanian Arab Armenian Ashkenazi Austrian Belarusian Belgian Berber British Bulgarian Croatian Czech/Slovak Danish Dutch English Estonian Europeans Finnish French German Greek Hungarian Irish Italian Jewish Israeli Jews Majorcan Jews (Chuetas) Latvia Lithuania Middle Eastern Moroccan Norwegian Polish Romani/Gypsy Romanian Russian Scottish Sephardic Serbia Slovenian

Slovakian South Slavic Spanish/Portuguese Swedish Swiss Turkish Ukrainian
Welsh

Reliability

While the laboratory methods used to determine your DNA markers are completely accurate and their statistical analysis is reliable, interpretation of the numerical results is subjective. Conclusions will vary. To form more confident opinions, we suggest that you combine the findings in this report with other testimony, such as that of DNA haplotypes, genealogical records and family history.

Confidentiality

Your testing, results and this report are 100% confidential.

Following Up

Join a Forum at [DNA Communities](#) for free. Just follow the prompts to register and set your preferences. Begin exploring your results and sharing your genealogy with others. Choose from European, World, Native American, Hispanic, Melungeon, African, Jewish and Gypsy/Roma discussions. Visit our [blog](#) for interesting reviews of news and research about genetics and ancestry tracing. Check out the populations where your ancestors originated on [Population Pages](#).
